Project Report

1. INTRODUCTION

1.1 Project Overview

Sometimes elderly people forget to take their medicine at the correct time. An app is built for the user (caretaker) which enables them to set the desired time and medicine. These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT device through the IBM IoT platform. The device will receive the medicine name and notify the user with voice commands.

1.2 Purpose

This project will be very useful for elderly people, because they forget to take their medicine at the correct time.

2. LITERATURE SURVEY

s.no	Paper name	Author name	Published year	Abstract
------	------------	-------------	----------------	----------

Project Report

1	A critical analysis of an IoT—aware AAL system for elderly monitoring	Aitor Almeida, Rubén Mulero, Piercosimo Rametta, Vladimir Urošević and Marina Andrić	2019	<p>A growing number of elderly people (65+ years old) are affected by particular conditions, such as Mild Cognitive Impairment (MCI) and frailty, which are characterized by a gradual cognitive and physical decline. Early symptoms may spread across years and often they are noticed only at late stages, when the outcomes remain irrevocable and require costly intervention plans. Therefore, the clinical utility of early detecting these conditions is of substantial importance in order to avoid hospitalization and lessen the socio-economic costs of caring, while it may also significantly improve elderly people's quality of life. This work deals with a critical performance analysis of an Internet of Things aware Ambient Assisted Living (AAL) system for elderly monitoring. The analysis is focused on three main system components: (i) the City-wide data capturing layer, (ii) the Cloud-based centralized data management repository, and (iii) the risk analysis and prediction module. Each module can provide different operating modes, therefore the critical analysis aims at defining which are the best solutions according to context's needs.</p>

Project Report

2	Elderly Perception on the Internet of Things-Based Integrated Smart-Home System	Tae Hee Jo , Jae Hoon Ma and Seung Hyun Cha	11 February 2021	<p>An integrated smart home system (ISHS) is an effective way to improve the quality of life of the elderly. The elderly's willingness is essential to adopt an ISHS; to the best of our knowledge, no study has investigated the elderly's perception of ISHS. Consequently, this study aims to investigate the elderly's perception of the ISHS by comprehensively evaluating its possible benefits and negative responses. A set of sensors required for an ISHS was determined, and interviews were designed based on four factors: perceived comfort, perceived usability, perceived privacy, and perceived benefit. Subsequently, technological trials of the sensor-set followed by two focus group interviews were conducted on nine independently living elderly participants at a senior welfare center in South Korea. Consistent with previous studies, the results of this investigation indicate that elderly participants elicited negative responses regarding usability complexity, and discomfort to daily activities. Despite such negative responses, after acquiring enough awareness about the ISHS's benefits, the elderly acknowledged its necessity and showed a high level of willingness.</p>

Project Report

3	IoT Based Pill Reminder and Monitoring System	Sultan Ahmad ,Mahamudul Hasan , Gouse Pasha Mohammed , Mohammad Shahabuddin , Tasnia Tabassum and Mustafa Wasif Allvi	July 2020	<p>There are many people around us who are the victims of chronic disease. Most of them suffering from dementia. Some people overlook to take care of health. Because of the lack of an expert system, people are forced to submit in frequent health related problems. By analyzing the data, an internet of things (IoT) based reminder system has been developed. It is designed to assist the patient who forgets to take medicine. The proposed system consists of an IoT enabled device and an android application. It mainly focuses on dementia patient. But it is beneficial for all. Patients will no longer have to worry about daily medication. The application will send a notification when it's time to take medicine. The mobile application is used for keeping the record in medicine details and reminding the schedule of medicine. We have used the IoT enabled Arduino device for monitoring the whole system. The device can sense whether a patient has taken medicine or not with the help of the infrared (IR) sensor. We have tried to develop a system which will help patients to manage their health care properly.</p>
4	HABITAT: An IoT Solution for Independent Elderly	Elena Borelli, Giacomo Paolini, Francesco Antoniazzi, Marina Barbiroli , Francesca Benassi and Federico Chesani	12 March 2019	<p>In this work, a flexible and extensive digital platform for Smart Homes is presented, exploiting the most advanced technologies of the Internet of Things, such as Radio Frequency Identification, wearable electronics, Wireless Sensor Networks, and Artificial Intelligence. Thus, the main novelty of the paper is the system-level description of the platform flexibility allowing the interoperability of different smart devices. This research was developed within the framework of the operative project HABITAT (Home Assistance Based on the Internet of Things for the Autonomy of Everybody), aiming at developing smart devices to support elderly people both in their own houses and in retirement homes, and embedding them in everyday life objects, thus reducing the expenses for healthcare due to the lower need for personal assistance, and providing a better life quality to the elderly users.</p>

Project Report

5	A Survey on the Internet of Things Solutions for the Elderly and Disabled: Applications, Prospects, and Challenges	Resul Das and	18 May 2017	<p>Advances in technology has not only led to the start of innovative solutions and new business opportunities in different sectors but also reduced manpower needs and operational costs. Furthermore, the quality of provided services has been improved. Therefore, recently, the Internet of Things (IoT) has gained a great momentum as a key enabling technology for a wide range of health care applications, especially for the elderly and disabled. Although, solutions based on IoT technology have started to support the elderly and disabled in many areas of their life and work and the IoT helps improve quality of life for the elderly and disabled, the amount of data collected by the IoT has increased tremendously and surpassed the expectations. This makes it necessary to investigate approaches and solutions in order to efficiently utilise large amounts of data, especially in health care applications. In this paper, we are first going to review existing approaches and IoT solutions specifically proposed and designed for the elderly and disabled. Then, we are going to investigate prospects and research challenges in the use of the IoT in the services designed for elderly people and people with disabilities to provide an insight into future research opportunities.</p>
---	--	---------------	-------------	---

2.1 Existing problem

By analyzing the data, an internet of things (IoT) based reminder system has been developed. It is designed to assist the patient who forgets to take medicine.

2.2 References

2.3 Problem Statement Definition

Some people find it difficult to learn new apps in this ever-expanding digital environment, and people nowadays tend to forget things more easily, such as taking their prescriptions. People need a way to remember to take their prescriptions without having to learn how to use sophisticated programs.

3. IDEATION & PROPOSED SOLUTION

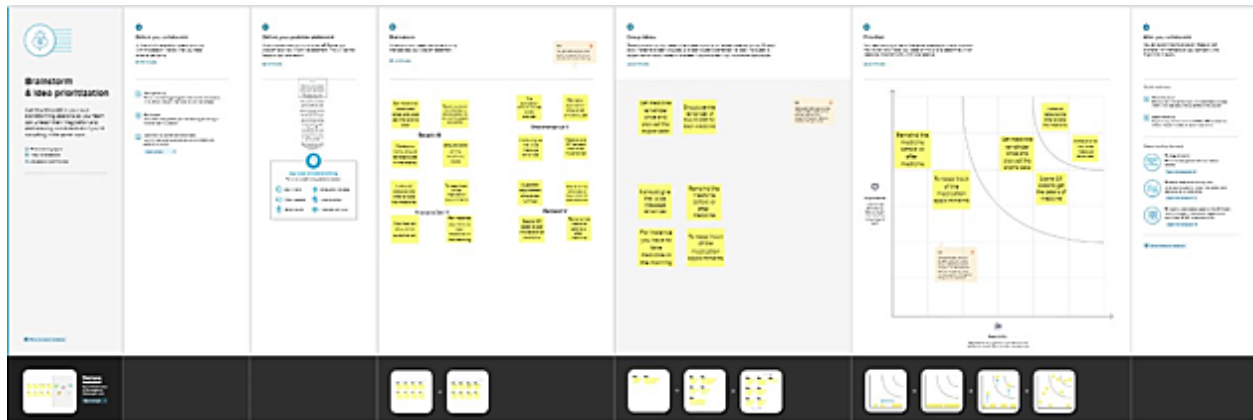

3.1 Empathy Map Canvas

Personal Assistance for Seniors Who are Self Reliant-Empathy Map

SAYS		THINK	
That was good idea!	I really like that feature	Whether I become dependent?	I need to pay for this?
Easy to reminder my work	How to interact with it?	Whether it will be help for all my works?	Whether all the time it will be available?
DOES		FEELS	
More Research	List pros/cons	Feeling Insecure	Excited
Check the reviews	Ask friends and family for opinions	Reduce loneliness thoughts	Overwhelmed

Project Report

3.2 Ideation & Brainstormin

3.3 Proposed Solution

The proposed system consists of an IoT enabled device and an android application. It mainly focuses on dementia patient.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Today, most people can expect to live into their seventies and beyond. In modern society, busy life has made people forget many things in day to day life. The older adults and the people victims of chronicle disease who need to take the medicines timely without missing dementia, forgetting things in their daily routine. This application is used to remind tablets on time.
2.	Idea / Solution description	It is created in such a way that older or normal people can use it easily for their prescription reminders.
.	Novelty / Uniqueness	It is a user friendly app that sends users medication and alert reminders, it help caretakers to manage prescription for their loved ones.
4.	Social Impact / Customer Satisfaction	Promotes safe independent living, leading to happier and healthier cared-for individuals.

Project Report

5.	Business Model (Revenue Model)	Sell it as subscription service. The model you will select will depend on your target market, business objectives, and the resources you already have available.
6.	Scalability of the Solution	Since the IOT technology is in improving stage, emerging new technology can be easily implemented in this project. This technology provides communication between care taker, doctor and family members.

3.4 Problem Solution fit

Problem-Solution fit canvas 2.0		Purpose / Vision		Team Id : PNT2022TMID20508	
Define CS, fit into CC	1. CUSTOMER SEGMENT(S) <small>Who is your customer? i.e. working parents of 0-5 y.o. kids</small> CS Customer is a Old man or woman who is suffering from some health issues who doesn't have a personal care taker to give prescribed medicine on time	6. CUSTOMER CONSTRAINTS <small>What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.</small> CC The customer is unaware of the prescription due to lack of knowledge to read a particular prescription. He/She is forgetting to take medicine on time before and after food because no care taker to remind.	5. AVAILABLE SOLUTIONS <small>Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking</small> AS If the medicine time arrives the web application will send the medicine name to the IOT device. The device will receive the medicine name and notify the user with voice commands.	Explore AS, differentiate	
	2. JOBS-TO-BE-DONE / PROBLEMS <small>Which jobs to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides.</small> J&P *Forgot to take medicine *The person will be notified to take medicine in a right time using alert messages	9. PROBLEM ROOT CAUSE <small>What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.</small> RC The seniors don't have care taker to guide them to take medicine according to the prescription because care taker lead their own life with their busy schedules so there is need of additional source.	7. BEHAVIOUR <small>What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)</small> BE The seniors directly seek for help to allot a person or any other devices which is based on reminding the seniors about the medicines which should be taken and monitor around the clock.		
3. TRIGGERS <small>What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a new off-line medicine in the press</small> TR Promote the usage of app through advertisements Seniors with learning disabilities may also triggers the usage of app	10. YOUR SOLUTION <small>If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits really. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour</small> SL An app is build for the user which enables him/her to set the desired time and medicine name to the IOT device. The device will receive the medicine name and notify the user with voice commands.	8. CHANNELS of BEHAVIOUR <small>8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.</small> CH *Upload details about medicine and get alert messages on correct time *Setting alarm at the correct time	Extract online & offline CH of BE		
4. EMOTIONS: BEFORE / AFTER <small>How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design.</small> EM *Feeling taking correct medicines at correct time After the usage of appThey feel healthy

Project Report

4. REQUIREMENT ANALYSIS

4.1 Functional requirement

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Mobile number Registration through Gmail Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Personal Information	Gathering patient's bio data and medicine history
FR-4	Scheduling	Doctor medicine prescription Doctor's appointment. Suggestion of food plan by nutritionist.

Project Report

FR-5	Reminding the medicine timings	Alert the person to take medicine with the correct dosage and medicine name. Remind the doctor's appointment. Remind everyday's diet plan.
FR-6	Emergency alarm	Doctor and caretaker gets the alarm when the person's health is abnormal, which is indicated by heart rate fluctuations or if any fall is detected. Caretaker gets the alarm for the person's missed medicine.

4.2 Non-Functional requirements

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Caretaker/doctor can easily schedule medicine timings through his/her dashboard. The person can acknowledge the medicine intake using a simple UI.

Project Report

NFR-2	Security	The person's information is secured by providing access permission only to the
-------	-----------------	--

		corresponding registered caretaker and doctor.
NFR-3	Reliability	The application is reliable because of authentication of users and providing database updates regularly.
NFR-4	Performance	The application uses virtual sensors, so the performance will be high. The modularization helps in improving the performance of the application.
NFR-5	Availability	The services provided are available to the registered users.

NFR-6	Scalability	As we are using IBM cloud, our application supports many users at the same time. Hence, it is scalable.
-------	--------------------	---

5. PROJECT DESIGN

5.1 Data Flow Diagrams

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

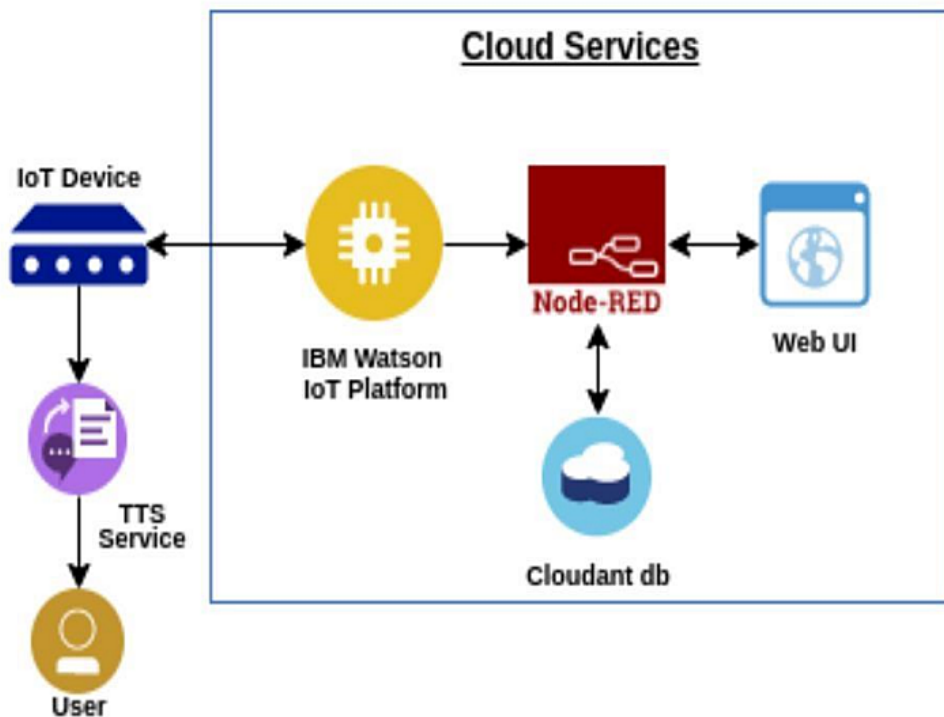

5.2 Solution & Technical Architecture

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- ❖ Medicine Reminders serve as good way to stay on track and uphold appropriate schedule.
- ❖ It is used to organize your medication doses for a certain length of time.
- ❖ It helps in decreasing medication dispensing errors and wrong dosages.
- ❖ Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram

Project Report

5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Caretaker)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-4	As a user, I can log into the application by entering email & password		High	Sprint-1
	Dashboard	USN-5	As a user, I can set medicine schedules..		High	Sprint-1

Project Report

		USN-6	As a user, I can update doctor's appointments.		High	Sprint-3
		USN-7	As a user, I will receive emergency notification if a senior citizen's health is abnormal.	I can contact the senior citizen directly.	High	Sprint-3
		USN-8	As a user, I can view medicine intake history.		Medium	Sprint-2
Customer(Senior citizens)	Dashboard	USN-9	As a user, I will receive medicine reminder notification at the scheduled time.	I can click confirm.	High	Sprint-2

		USN-10	As a user, I can view medicine intake history		Medium	Sprint-2
Customer(Doctor)	Dashboard	USN-11	I can suggest a diet plan.		Medium	Sprint-3

Project Report

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, and password, and confirming my password.	3	High	saranya

Sprint-1	Confirmation Email	USN-2	As a user, I will receive a confirmation email once I have registered for the application	4	High	Jayaram
Sprint-1	Authentication	USN-3	As a user, I can register for the application through Gmail and mobile app.	4	Medium	Yuva sree
Sprint-1	Login	USN-4	As a user, I can log into the application by entering email & password	3	High	Magesh Kannan
Sprint-1	Dashboard	USN-5	As a user, I need to be able to view the functions that I can perform	4	High	Saranya Jayaram

Project Report

Sprint-2	Notification	USN-1	As a user, I should be able to notify my parent and guardian in emergency situations	10	High	Yuva sree Magesh kannan
Sprint-2	Store data	USN-2	As a user, I need to continuously store my location data into the database.	10	Medium	Jayaram
Sprint-3	Communication	USN-3,1	I should be able to communicate with user	6	Low	Magesh kannan
Sprint-3	IoT Device – Watson communication	USN-1,4	The data from IoT device should reach IBM Cloud	7	Medium	saranya
Sprint-3	Node RED- Cloudant DB communication	USN-5,2	The data stored in IBM Cloud should be properly integrated with Cloudant DB	7	High	Jayaram
Sprint-4	User – WebUI interface	USN-1,4	The Web UI should get inputs from the user	6	High	Jayaram Magesh kannann
Sprint-4	Alarm	USN-2,3,5	The Alarm of the remainder should be done based on the medication time	7	High	Yuva sree Saranya

Project Report

6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6.3 Reports from JIRA

The screenshot displays the JIRA interface for a project named 'Medicine Reminder Software project'. The main view is the 'MEDICINE board', which is a Kanban board. The board is organized into three columns: 'TO DO', 'IN PROGRESS', and 'DONE & CLOSING'. The 'TO DO' column contains a '+ Create issue' button. The 'IN PROGRESS' column is currently empty. The 'DONE & CLOSING' column contains four issues, each representing a sprint: 'Sprint 1 WELCOME 1', 'Sprint 2 WELCOME 4', 'Sprint 3 WELCOME 5', and 'Sprint 4 WELCOME 6'. Each issue has a status icon (a green checkmark) and a color-coded dot. The board also features a search bar, a 'GROUP BY' dropdown set to 'None', and a 'Quickstart' button. The left sidebar shows navigation options like 'Roadmap', 'Board', 'Code', 'Project issues', 'Add shortcut', and 'Project settings'. The top navigation bar includes links for 'Your work', 'Projects', 'Filters', 'Dashboards', 'People', and 'Apps', along with a 'Create' button and a search bar.

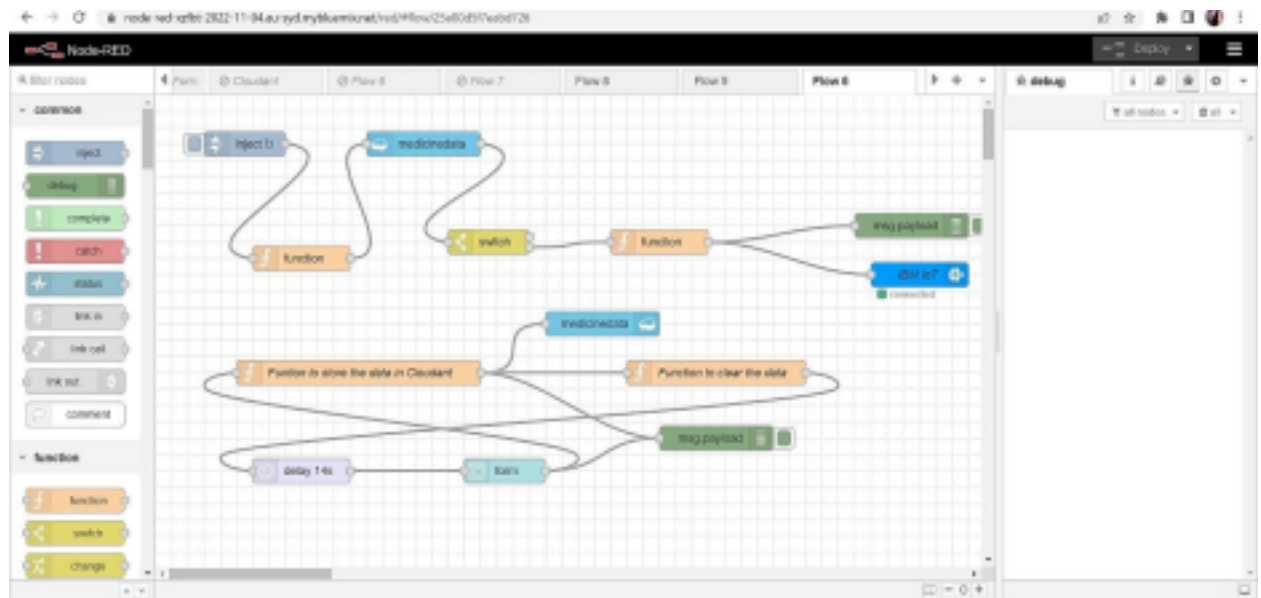

Project Report

7. CODING & SOLUTIONING (Explain the features added in the project along with code)

7.1 Feature 1

Node-Red

It is built on Node.js, which is a non-blocking, lightweight I/O model, making it lightweight and efficient. Flows created in Node-RED are stored using JSON, and can be imported and exported and shared with ease.

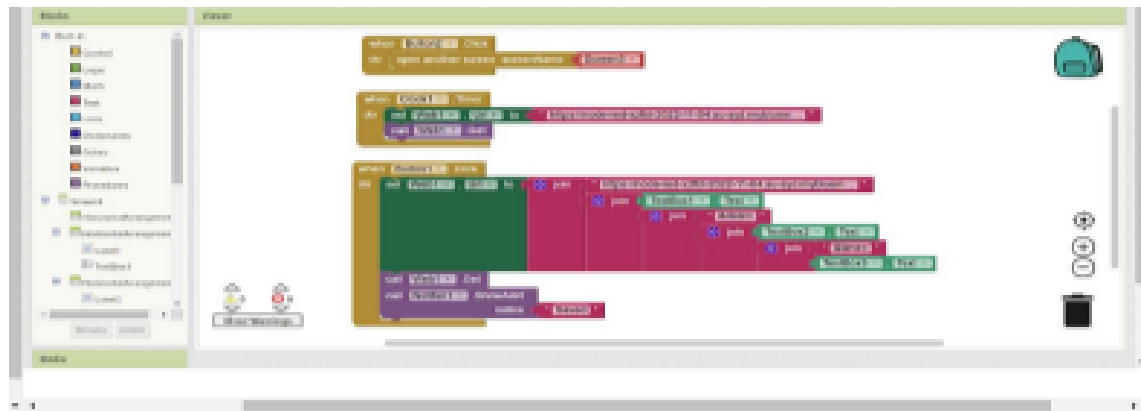

7.2 Feature 2

MIT App inventor

MIT App Inventor is an online platform designed to teach computational thinking concepts through development of mobile applications. Students create applications by dragging and dropping components into a design view and using a visual blocks language to program application behavior.

Project Report

7.3 Database Schema (if applicable)

The screenshot displays the Databricks workspace interface. On the left is a sidebar with navigation icons. The top bar shows the table name 'medicinedata'. The main area features a table view with columns '_id' and 'medicine'. The table contains seven rows of data, each with a checkbox, a timestamp, and a medication name.

	_id	medicine
<input type="checkbox"/>	18/11/2022 10:47 AM	Ishaq
<input type="checkbox"/>	2022-11-13 17:13	acetaminophen
<input type="checkbox"/>	2022-11-13 17:33	Paracetamol
<input type="checkbox"/>	2022-11-13 18:32	Insulin
<input type="checkbox"/>	2022-11-13 19:40	Glipside
<input type="checkbox"/>	2022-11-16 23:09	Metformin
<input type="checkbox"/>	2022-11-16 23:36	Antibiotics

8. TESTING

8.2 User Acceptance Testing

1.Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the project-personal assistance for seniors who are self reliant at the time of the release to User Acceptance Testing(UAT).

2.Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	10	4	2	3	20
Duplicate	1	0	3	0	4
External	2	3	0	1	6
Fixed	11	2	4	20	37

3.Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	2	0	0	2
Client Application	2	0	0	2
Security	1	0	0	1

10. ADVANTAGES & DISADVANTAGES

Advantages:

- Patients will no longer have to worry about daily medication. The application will send a notification when it's time to take medicine. The mobile application is used for keeping the record in medicine details and reminding the schedule of medicine.

Disadvantages:

- Security and privacy remain a major concern deterring users from using IoT technology for medical purposes, as healthcare monitoring solutions have the potential to be breached or hacked.

11. CONCLUSION

- This application prevents wrong dosage of the patient and also safe to the patient. It will reduce the effort of patient as well as the caretaker of the patient in remembering medicine and patient will get alert of medication along with medicine name at appropriate time.

Project Report

12. FUTURE SCOPE

- IoT has a lot of potentials and it's not only in healthcare. In future challenges of IoT in healthcare, many companies are working on new ways to solve the challenges with the help of this technology to help our medical world.
- It can reach every patient from all over the world and connect doctors with patients. There is no denying that IoT has already made a huge impact and is only set to grow further.
- It is a matter of time before the future use of IoT in healthcare medical industry will be run mostly by IoT technology and will be treating patients in less time and low cost of treatment.
